1 – What is Sculpt?

1.1 Literally

Sculpt is a game of creativity and combat for 3-5 players. The objective is to create a Sculpted being and succeed in a combative trial to emerge into the world, the first of your kind to do so. The game consists of two phases; Emergence, where you create your character by choosing cards that grant you abilities and personality, then Combat, where you use your sculpted being to fight in one of many combative and collaborative modes.

1.2 Vibes

Sculpt is a game where power comes from unlikely synergy, and too much power will get you killed. It's a game where you are constantly balancing the need to cooperate with the other players to defeat the boss and escape, against your desire to have more resources left when the dust settles.

Sculpt has as few rules as we could manage, for a game ultimately about tactical character creation and combat. This means there are situations that can unfold which are not explicitly explained here. When these situations arise, we recommend going with the table's consensus on what should happen. After the game you can look up the details of the rules in the Appendix of the rulebook or head to the discord server for full rules discussions for each card.

1.3 Vision

Sculpt is a game made by people who like messing with the games they play. You will find blank cards of every type in this box, to use as you wish. Additionally, if you scan the QR code on the back of this rulebook, you will be invited to the Sculpt discord server. Here you can share photos of your own created cards, and monthly favourites of ours will be collated. We hope that the game can continue to evolve with feedback and contributions from players. If you think the game would be more fun if you tried a different ruling, please try it and let us know how it went.

2 – Your Sculpted Being

2.1 Core Statistics

There are three core stats that define your character in Sculpt: Jazz, Heft, and Weird. They are essential for your existence, and if any become entirely wounded, you die. Each stat can be a number between 1 and 6. You will choose your stats during Emergence.

Jazz: Represents your manoeuvrability and coordination. It affects how likely you are to hit and critically hit with attacks. Jazz Tokens may be spent to climb obstacles and perform feats of acrobatics.

Heft: Represents your bulk and raw strength. It affects how much composure you have, which enables you to take a hit without being seriously injured. Heft Tokens may be spent to break things and overpower your foes.

Weird: Encompasses many things, including your creativity, passion, and magical prowess. While it does not affect any core characteristic of your being, Weird will allow you to maximise the potential of the cards you acquire. Spending Weird Tokens may cause abilities on cards to trigger whenever you do so, and Weird allows you to interact with many terrain features during Combat.

2.2 Secondary Statistics

Secondary statistics are determined by your base stats. See the combat section for a more detailed description of the mechanics that these statistics relate to.

Hit Value: Your hit value is determined by your Jazz. When you attack, this is the number you need on a d12 roll to hit. Set your Jazz spinner to the right number to see your Hit value and Crit Thresholds.

Critical Thresholds: Jazz also determines your critical thresholds. When you attack, if you roll as high as one of your critical thresholds, you get to pick that many critical effects in addition to dealing damage.

Composure: Taking damage depletes your composure, and when it runs out you will suffer a wound. Your composure is equal to your Heft.

Movement Speed: This is how many hexes you move when you take a move action. The default is 4 but equipped cards may modify this. You can adjust the dial on your spinner to track this.

2.3 Cards

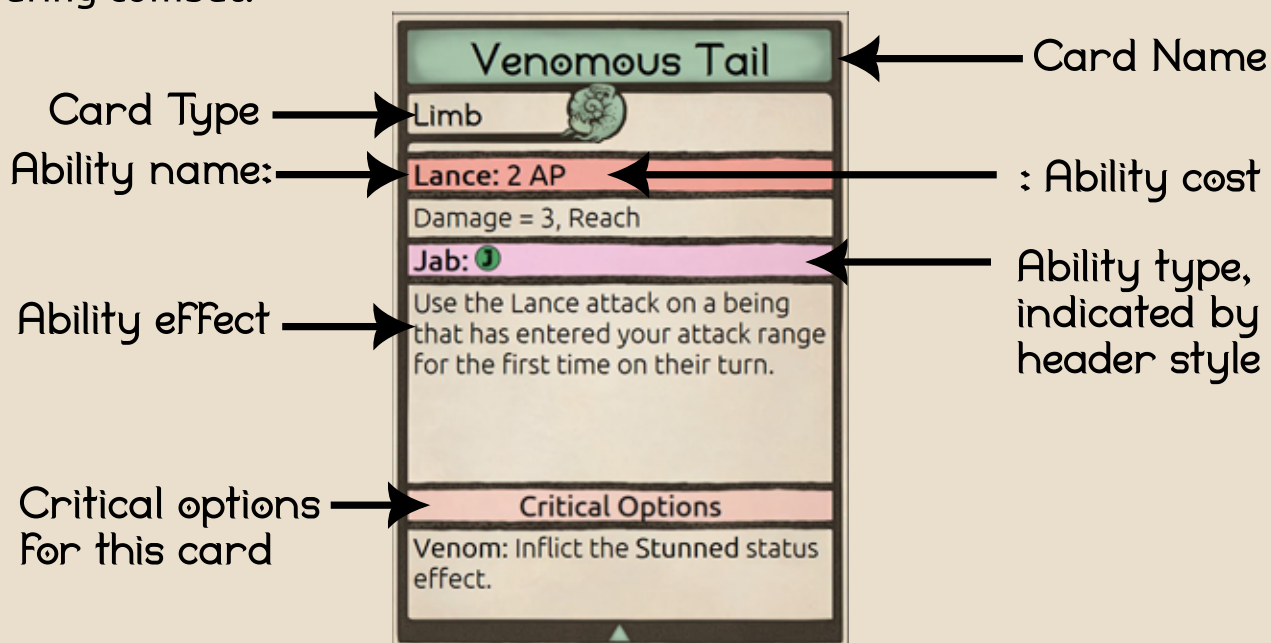

There are three card types you can equip in Sculpt.

Forms: Describe the shape and size of your body. Your form gives you a significant amount of capability and opportunity for synergy. Many change your movement speed or give defensive abilities. You may only have one form equipped, but extra forms gained during emergence may be held and traded.

Limbs: Things attached to your form that you can use. The majority of limbs have activated abilities, and many have attacks. You may have any number of limbs equipped.

Impressions: The influence of wild magic, embossed on your form are imprints that grant you personality and power. You may have any number of impressions equipped.

A completed sculpt character will have 6 cards, which will consist of one form and a mix of limbs and impressions. There is no limit to the total amount of cards you may have equipped if you gain additional cards during combat.

3 - Emergence

There are a total of 6 rounds in emergence, some give players a choice of card to take from a visible set, some allow you to draw from a deck or trade, and some offer a choice of good, mixed, and bad outcomes. The emergence board describes what to do in each round. By the end of emergence you will have a character ready to play in battle.

3.1 Boss Selection

Before creating characters, select which boss you will face. Put their map and summary card on the table so that you can make more informed decisions during character creation.

Take note of the win condition for the fight and the information on the boss summary card. Each boss comes with unique strengths and weaknesses, and different objectives for winning. The collaborative - competitive slider indicates how much the boss encourages you to work together to defeat it, and some cards are more collaboratively or competitively themed.

3.2 Round 1: Primordial Pools

Your sculpted being begins deep within the Earth, where slumbering magics infuse rock and clay. Deal each player 2 forms, 2 limbs, and 2 impressions. Then everyone chooses one card of each type to keep. This forms the basis of your character.

Give the player with the first form alphabetically the first player token. From this point on, players take turns in clockwise order moving up through the ground, developing their sculpted being with more cards. After each section of emergence, move the first player token around clockwise, which changes the starting player for next round.

3.3 Round 2: Crystal Depths

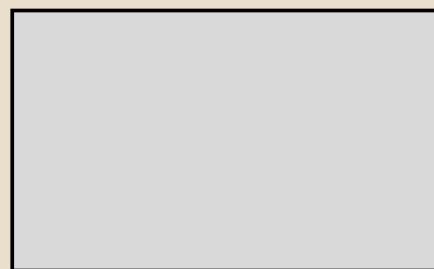

Flip one of each card type face up on the table. Starting with the player with the first player token, each player chooses between one of the face up cards, or may take two cards from any face down pile and select one to keep. Replace any face up cards taken before the next player picks.

3.4 Round 3: Crystal Caves

Discard any face up cards and replace with fresh cards. Repeat the process of round 2 starting with the new first player.

3.5 Round 4: Maze of Roots

Each player selects a card type and takes 4 cards of that type from the draw. Each player keeps one of the 4.

3.6 Round 5: Midden Market

Display two of each card type from the draw face up. Starting with the first player, each may trade one of their cards for a face up card. The card type does not need to match. You can decide to keep your setup and not trade if you wish. Players trading later in the round can take cards that have been traded in by other players.

3.7 Round 6: The Antechamber

Each player chooses one positive status effect to gain. The options are **Well Rested**, **Imbued**, and **Monstrous**.

You now assign your stats. You have a total of 10 points to spread between the three. You may not have a score higher than 6 in a stat. If you are a new player, we recommend starting with a balanced character that has 4 points in their favoured stat, and 3 points in the others. Because a character is killed if they are completely wounded in any of their stats, a balanced distribution is recommended for durability. Unbalanced stats allow for massive strengths, with weaknesses that must be counterbalanced by your cards.

3.8 Sculpting

While progressing through emergence, you should begin to craft a miniature for your character. Materials are provided, although you can use many small household objects to adorn your sculpted being. Be creative in designing your character. They do not need to match your cards, although using them as a guide can help. You must be able to fit your miniature on a one hex base (or 3 hex base for a large form) and it should not have far reaching limbs as the sculpting material self adheres. Sculpted beings are sometimes humanoid but often not, and you may use a previously made miniature if you are in a rush.

3.9 Summary

Upon creation your character should have:

- 10 points assigned between Jazz, Heft, Weird.
- Jazz, Heft, Weird , and composure tokens.
- One equipped form.
- A total of 6 equipped cards.
- A status effect.
- A miniature.
- A character sheet.
